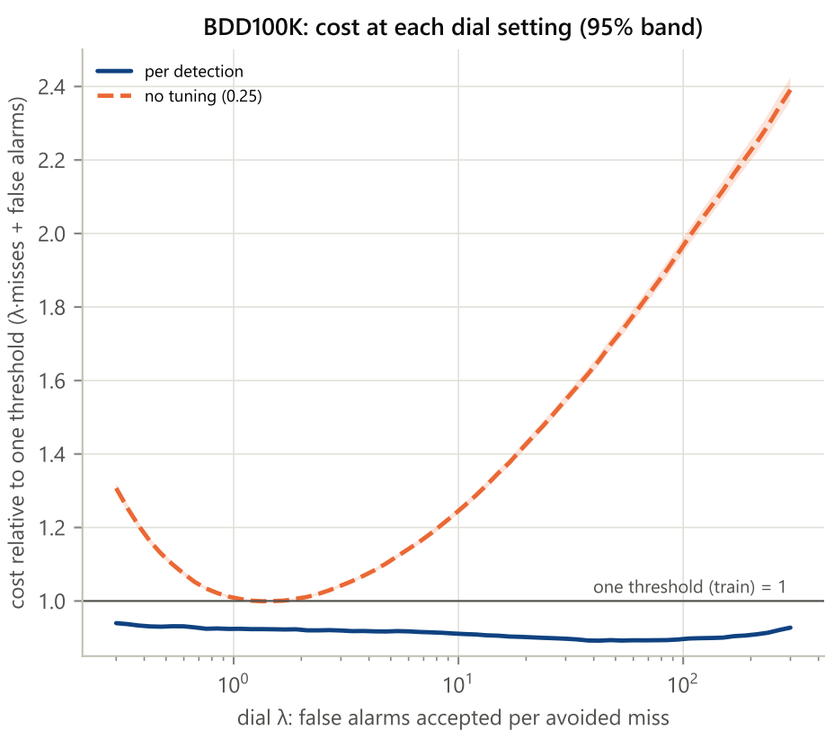
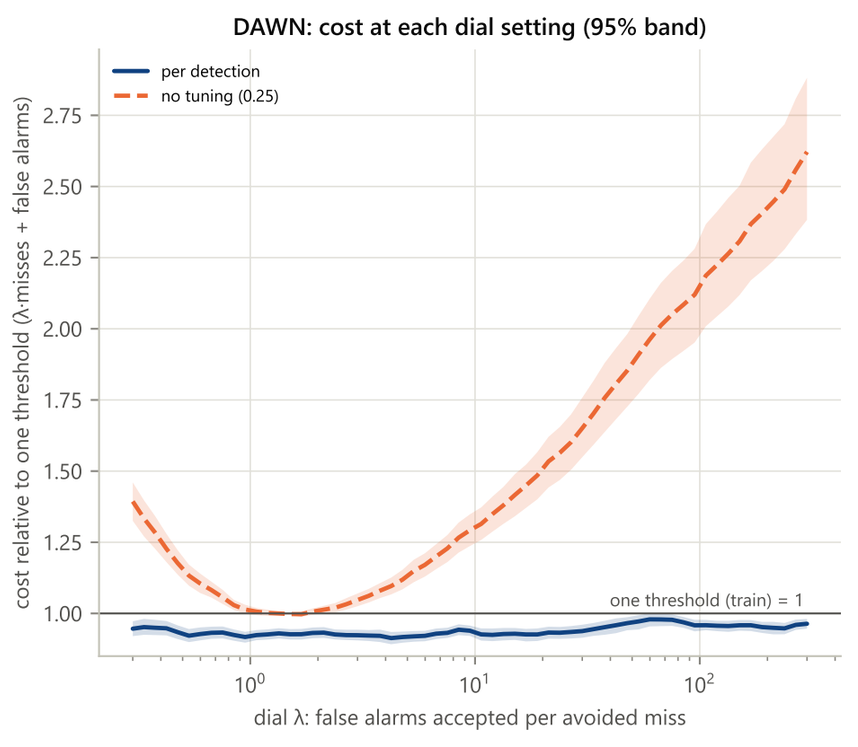
Calibration on images never seen in training
BDD100K day
BDD100K night
BDD100K rain night
DAWN fog
DAWN all
share actually real
model's chance the detection is real



BDD100K: cost at each dial setting (95% band)
per detection
no tuning (0.25)
cost relative to one threshold (λ·misses + false alarms)
one threshold (train) = 1
dial λ: false alarms accepted per avoided miss



DAWN: cost at each dial setting (95% band)
per detection
no tuning (0.25)
cost relative to one threshold (λ·misses + false alarms)
one threshold (train) = 1
dial λ: false alarms accepted per avoided miss
